ABSTRACTED-PUB-NO: CN 1402107A

BASIC-ABSTRACT:

NOVELTY - An automatic network access system is composed of
a card containing
the information about automatical access to the preset-up
target web site and
opening its web page, a card reader, and a microcomputer
processor connected
with said card reader and Internet for displaying a browser
picture.  If said
information is not output for a defined time, the network
access is stopped.
